

Last summer one of TriHealth's document storage vendors experienced a breach. The incident involved very limited protected health information (PHI) belonging to 64 individuals. For the majority of the 64 individuals, Full Name, Date of Birth, and Name of Healthcare Provider were the types of PHI involved, and SSN was involved for only one of those 64 individuals. TriHealth has no indications that those 64 individuals' PHI has been posted online or made public in any way, and there have been no reports of fraud or misuse occurring in connection with the PHI.

TriHealth takes the privacy and confidentiality of individuals' health information seriously. If you have questions or concerns regarding this incident, you may contact TriHealth using any of the following:
