

CASE FOR SUPPORT

Cancer and Blood Institute

As the region's largest and most respected provider of cancer care, TriHealth is committed to helping lead advances and breakthroughs in the cure and treatment of cancer through research and clinical innovation.

The reality of cancer is that it arrives in the moments of our lives that are unexpected. Whether cancer has directly affected you, a family member, or a friend, it has most likely touched your life in some way. The TriHealth Cancer and Blood Institute at Good Samaritan Hospital provides multidisciplinary care with specialty physicians focused on each form of cancer, providing the highest quality care for the whole person right here in our community. In fact, TCBI has grown to become the region's most comprehensive and most preferred

cancer program, now serving nearly 50% of all cancer patients across Greater Cincinnati. But with the rate of diagnoses increasing, our neighbors need our expertise and compassion now more than ever. Our patient-centered, multidisciplinary approach includes advanced treatment options, access to national clinical trials, state-of-the-art facilities, and comprehensive services, such as nutrition, behavioral health, pastoral care, and more.

2M+
New cancer cases
projected in 2024 for
the 1st Time Ever

Of all cancer deaths in people under 50,
colorectal is now **#1 in men** and **#2 in women**

4 screenable cancers on the rise
with breast and prostate for all ages,
colorectal for ages 0-54, and
cervical for ages 30-44

**NATIONAL
RECOGNITION**

for Lung Cancer Center
of Excellence,
Joint Commission
Leukemia Certification,
FACT Accreditation
for Cellular Therapy

The Urgent Fight Continues

TriHealth physicians detect cancer more than those at any other health care system in the region. In the previous year, **8,319 patients** with cancer were treated at a Good Samaritan location.

Patients' No. 1 Desire is Convenience When Receiving Care:

Having all care take place in one building. This will be the future of TCBI in our new ambulatory center.

Advanced Cellular Therapy

Precision Medicine

Outpatient Care

At TriHealth Cancer & Blood Institute all our skills and resources on turning cancer patients into cancer survivors

TCBI is home to a Comprehensive Blood Disorder Program for those without cancer, but needing care involving bleeding disorders and more.

“ Hope must be defined in a broader sense – hope is about time, about caring for people for as long as they have. We cannot take our eye off that. It’s why we have invested the way we have. National averages tell us that 65 percent of cancer patients have a five-year survival rate. Success cannot always be measured by outcomes alone, sometimes it should be measured by quality of time. Building a dedicated division of oncology, investing in the workforce, infusion therapy, radiation therapy, new surgical techniques, advanced imaging, lab, genetics, cellular therapy, technology, and facility infrastructure are all currently being pursued as options for how TriHealth will continue to care for people with a diagnosis of cancer.”

– Mark G. Witte, Vice President,
Clinical Service Lines | Cancer & Blood Institute, Endocrinology, Infectious Disease, Rheumatology

Cellular Therapy Update

A bone marrow transplant is an avenue to deliver a very large dose of chemotherapy and rescue the patient by receiving back their own stem cells for recovery. The hope is to cure or lengthen a patient’s remission status.

Only Outpatient driven cellular therapy program providing Autologous Bone Marrow Transplants in the City of Cincinnati

1st Transplant was May 12th, 2022

Successfully transplanted: 55 patients

Upcoming in next 6 months: 10+ patients

JOIN US IN PROVIDING THE REGION'S MOST PREFERRED CARE TO OUR PATIENTS BATTLING CANCER.
