

Eric Okum MD, a cardiothoracic surgeon at TriHealth Cardiac Vascular Institute, has a passion for the advancement of the cardiothoracic specialty dedicated to applying minimally invasive surgical methods so his patients can have better and faster recoveries. A Cincinnati native, he was the first physician in the United States to treat inappropriate sinus tachycardia (abnormally fast heart rate) using an advanced ablation technique. A technique he learned training in Brussels, Belgium. He specializes in aortic valve and bypass surgery, atrial fibrillation surgery, and implantation of heart assist devices, and he also treats patients with heart failure. He is the co-author of more than a dozen clinical articles, and provides education sessions, instructional surgical videos, and participation on expert panels to advance the knowledge of other providers.
