

MyChart: Two-Factor Authentication

Purpose/Change: MyChart will ask for a second step to confirm your identity when you log in. This helps keep your account safe.

To set up Two-Factor Authentication

1. Log into your *MyChart* account using the MyChart App or Web Browser.

2. Select the Menu icon in the top left corner

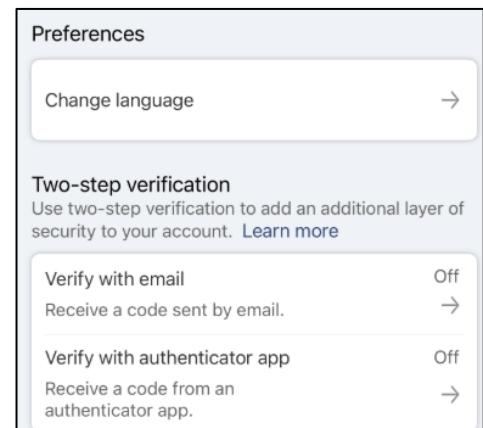

- When using the **MyChart App**, search for **Account Settings**

- When using a **Web Browser**, search for **Security Settings**.

3. Scroll to **Preferences** to find the **Two-Step Verification** section.

Next, determine how you would like to receive the verification code by selecting one of the options:

1. Verify with email (recommended): where you'll receive a code sent to the email address you provide.

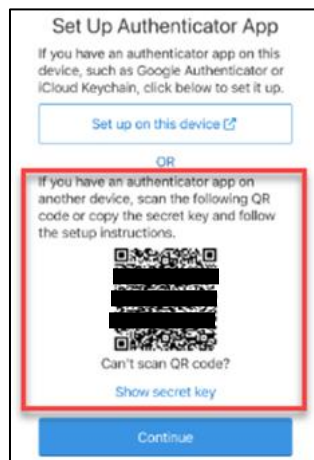

- Enter your *email address and password* into the email address and password fields:
- You'll receive an *email notification* from MyChart Two-Factor Authentication
- Go to your email account, open the message from MyChart and *copy the code* provided to you.
- Return to MyChart and paste it into the *enter code* field, then verify.

2. Verify with authenticator app: where you'll receive a code from an authenticator app. If you already have an authenticator app on your device, such as Google Authenticator, Microsoft Authenticator, or any other Authenticator:

- Select "*set up on this device*".
- Your password app that your device uses will appear, click *continue*.
- *Allow* notifications for your password app.
- Verify your identity by tapping on the *verification code banner*.
- The code populates automatically into the *enter code* field and click *verify*.

3. If you have an authenticator app on another device, you can scan the QR code or copy the secret key and follow the setup instructions.

Example:

Verify Two-step verification is turned on from Account Settings (or Security Settings on a web browser). Two-Step Verification will have a blue dot and indicate that it is On.
